

How Reliable Is Your Patient ID?

Have you experienced any of these patient identification symptoms?

Pile-ups at admissions that slow work due to...

unreliable printers that jam, break, or are difficult to use.

supplies that are awkward to load or take time to calibrate.

Patient misidentification that leads to workarounds due to...

wristbands that fade, smear, smudge, or get lost.

scanners that can't read faded, curved, or distorted barcodes.

When you can't positively identify the patient, you open the door to medical errors that expose patients and healthcare providers to preventable risk.

Secure, Durable Patient Identification That Works

Positive Patient ID: Built for Healthcare and Built to Last

Zebra ZD510-HC Printer and Wristband Cartridges

Self-calibrating printers are easy to use, set up, and support. Cartridge-loaded supplies install quickly for less waiting at admissions.

Zebra DS8108-HC Handheld Imager Series

Captures nearly any barcode at first scan for error-free productivity, accurate data capture, and less patient disruption.

Zebra TC51-HC Touch Computer Series

Reliable, high-accuracy scanning of barcodes, images, and documents from a device built tough for the demands of healthcare. Works with gloves, stylus, or wet hands to keep care moving.

Zebra Z-Band Wristbands + Z-Band Thermal Wristbands

Set standards for longevity and comfort. Stays as long as the patient—at least 14 days—with solutions for adults, infants, pediatrics, and maternity.
